

Humanscale

Chrome-Free Leathers

Freedom Headrest Chair, Ticino - Obsidian

Mindful Design

Luxurious, elegant and enduring, Humanscale's new chrome-free leathers are better for the user and better for the environment. In addition to being more environmentally conscious, Humanscale's premium leathers exceed industry standards in performance and durability.

Our 'alternatively tanned' leather collection is manufactured without chromium, a harmful chemical used in most methods for tanning leathers. Instead, synthetic vegetable tanning and clear water technology are used to ensure our leathers are free from heavy metals, reducing the risk of causing harm to the environment during production and to the end user as a finished product.

As one of the first manufacturers to exclusively offer chrome-free leather for our seating lines, Humanscale is committed to using materials and manufacturing processes that are safe and sustainable.

Available Colors

Humanscale offers three collections of premium, chrome-free leathers – Ticino, Corvara and Elmosoft. Each collection is dyed with a surface coating to enhance durability and provide the highest level of performance and quality.

Because leather is a natural product, its surface changes with progressive wear – especially with lighter colors. By using a Surface Protection System (SPS)¹ on our lighter colors of leather, they are more durable, easy to clean and less sensitive to stains.²

Ticino

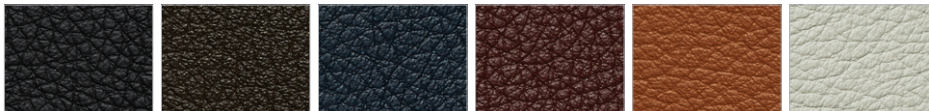

Ticino is a coated, corrected-grain leather engineered for exceptional durability and a uniform appearance. Its robust surface is designed to withstand wear while offering a sophisticated, clean aesthetic. Available in a palette of rich, nature-inspired colors, Ticino combines practicality with elegance, making it an ideal choice for high-performance applications.
